

Answer

The purpose of the study was to compare the effectiveness of a computerized system and a paper-based system. The study is a quasi-experimental study. The researchers used a pre-test and a post-test design. The study was conducted in a laboratory setting. The researchers used a pre-test and a post-test design. The study was conducted in a laboratory setting. The researchers used a pre-test and a post-test design. The study was conducted in a laboratory setting.

Answer

The study was conducted in a laboratory setting. The researchers used a pre-test and a post-test design.

Answer

The researchers used a pre-test and a post-test design. The study was conducted in a laboratory setting. The researchers used a pre-test and a post-test design. The study was conducted in a laboratory setting. The researchers used a pre-test and a post-test design. The study was conducted in a laboratory setting.

The researchers used a pre-test and a post-test design. The study was conducted in a laboratory setting. The researchers used a pre-test and a post-test design. The study was conducted in a laboratory setting. The researchers used a pre-test and a post-test design. The study was conducted in a laboratory setting.

1. The researchers used a pre-test and a post-test design. The study was conducted in a laboratory setting.
2. The researchers used a pre-test and a post-test design. The study was conducted in a laboratory setting.
3. The researchers used a pre-test and a post-test design. The study was conducted in a laboratory setting.

The researchers used a pre-test and a post-test design. The study was conducted in a laboratory setting. The researchers used a pre-test and a post-test design. The study was conducted in a laboratory setting.

Answer

1. The researchers used a pre-test and a post-test design. The study was conducted in a laboratory setting.
